# A. INTRODUCTION

#### 1. Preface

- 1.1 The purpose of this Part 2 Facilities Program is to propose the need for a new School of Social Work Building. This document will present the specifications for each of the proposed functions / programs, as well as the design guidelines for construction.
- 1.2 This Facility Program serves several purposes. It is a facilities program statement that is utilized to define the project and direct the Consultant employed by University of Maryland Baltimore to prepare plans and specifications required for contract bidding and construction. In addition, the document also:
  - (a) Affords a planning tool with which to develop project familiarity and assess priorities
  - (b) Details the rationale and justification for the project, outlining functional need and existing conditions pertaining to facilities to be constructed
  - (c) Supports the budget request for funding
  - (d) Serves as the focus of review
- 1.3 This document is also included as a part of the contract with the Consultant for the design of the project and in relation to this function, the document will:
  - (a) Identify the performance requirements for the project site
  - (b) Provide a detailed description of the project scope
  - (c) Describe the functional use, requirements, and performance standards for the project
  - (d) Identify the engineering and planning objectives and criteria to be incorporated in the design
  - (e) Reference applicable codes and design standards as well as methods and practices required by the client
- 1.4 This Part 2 Facilities Program is organized into five major sections:
  - (a) Section 1, Proposal for a New Facility presents an overview of the Mission, Vision, and Values, History, and Institutional Identity, and describes the Purpose and Facility Needs for a New School of Social Work.
  - (b) <u>Section 2, Instructions to the Consultant</u> outlines the project scope, identification of project responsibilities and information to be provided to the Consultant, and

- stipulations regarding submittals, reviews, and approvals and codes.
- (c) <u>Section 3, Site Development Criteria</u> details site considerations that must be considered during the design and construction phases.
- (d) <u>Section 4, Building Design Criteria</u> specifies the building requirements.
- (e) <u>Section 5, Space Requirements</u> specifies the space requirements, including room elements and spatial requirements.

# B. <u>SECTION 1, PROPOSAL FOR A NEW FACILITY</u>

### 1. Information about Agency

- 1.1 The University of Maryland, Baltimore ("UMB" or "the University") is in the City of Baltimore and is the State of Maryland's principal professional education and medical center focused on the health and condition of our society. The campus is comprised of the University of Maryland Schools of Dentistry, Law, Medicine, Nursing, Pharmacy, Social Work, the Graduate School, the Thurgood Marshall Law Library, and the Health Sciences and Human Services Library. The campus also encompasses the closely related but independent UMB BioPark, University of Maryland Medical Center (UMMC), including the Shock Trauma and Cancer Centers, the Maryland Institute for Emergency Medical Services Systems, the Institute for Human Virology, and the regional Veterans Administration Medical Center.
- 1.2 The seventy-five-acre campus is comprised of 65 acres occupied by the University of Maryland, Baltimore and 14 acres occupied by the related institutions. The campus is a densely developed urban setting of approximately 23 city blocks at the western edge of Baltimore's central business district. A daily campus population of over 25,000 persons including enrollment of more than 6,800 students engaged in professional education, research, health care and outreach services that improve the lives of not only Maryland's citizens but the world's population.
- 1.3 UMB's emphasis on the health and condition of our society is reinforced by its commitment to be a driving force in Maryland's economy in the bioscience research arena. In 2020, the University was awarded \$687.7 million in grants and contracts. UMB yields more than \$13 in economic activity for each \$1 of state general fund appropriation and is responsible for nearly 23,000 jobs. The University generates over \$3 billion in annual economic impact and provides more than 2 million hours a year in service to the public.
- 1.4 The University has a long and rich tradition of research activities to support the learning that comprises the University's primary focus. Research elevates the quality of clinical care, community services, and educational programs and raises the excellence of the entire campus. It also positively impacts the retention and recruitment of faculty and staff. In response to the goals set by the Board of Regents, the University established that maintaining a competitive edge as a center of excellence in life and health sciences is a key goal for the entire campus community.

# 2. University of Maryland School of Social Work

2.1 The mission at the University of Maryland School of Social Work is to develop practitioners, leaders, and scholars to advance the well-being of populations and communities and to promote social justice. As national leaders, the School of Social Work creates and uses knowledge for education, service innovation, and policy development.

## 3. Major Purpose of Project

- 3.1 The purpose of this project is to create a modern School of Social Work building for the University to adequately house its current and projected courses of study, faculty, administration, and associated Program centers. The school is currently scattered across 6 buildings, including two off-campus leased locations. Beyond basic space deficiencies, its principal campus building is obsolete due to numerous intrinsic planning deficiencies, poor access, inflexible teaching spaces, and severely burdensome deferred maintenance needs. The new building will allow for the consolidation of the school's resources and departments into a single facility and will reduce the burden on the school for contracting out leased space for its programs. Housing the entire Social Work program in one physical complex that uses the synergy of teaching, professional training, student/faculty interaction, and co-curricular and extracurricular activities will create a vibrant, diverse, and professional learning and service community.
- 3.2 The new School of Social Work building will house the University of Maryland School of Social Work, including its classrooms, training facilities, class labs, open labs, research areas, offices, study rooms, meeting rooms and building support facilities. Of note is the greatly increased need for staff office and meeting space, proportional to the fourfold growth of the school's research profile since roughly 2007. A period that saw research activity grow from \$10.2 M to \$45.2 M (2019 awards), such that the school now ranks second at the University in research award dollars. In contrast to medical research, social research is conducted both in a field setting and an office setting, driving the needs enumerated later in this document.

## 4. Proposed Site Location

- 4.1 The site of the new School of social work building is bounded by N. Greene Street on the east, W. Lexington Street on the south, and Pearl Street on the west.
- 4.2 A row of blighted and vacant structures on the south side of the site, fronting W. Lexington Street, have been demolished. Additionally, UMB is pursuing acquisition of the Post Office occupying the small block to the south of the project site. If successful, this block would be redeveloped into a campus green space complementing the new School of Social Work. The site area is approximately 1.1 acres. See Site Plan, Figure 3.
- 4.3 The site is a prominent location for this important building, which will be a signature addition to the campus. The creation of the building on this site will add greatly to the unique urban qualities and strengthen and enhance its role in the community. The importance of the site as home to a future UMB academic building was first articulated in the University's 10-year Facilities Master Plan, published in 2017. This project is integral to UMB's execution of that plan, and emblematic of the University's commitment to Westside revitalization. The School of Social Work, with its mission of innovation in community service, is moreover an ideal presence for a new campus edge location with high potential for community integration.

#### 5. Project Phasing

5.1 The project will be completed in one phase of design and construction, expected to begin design when funding has become available in October 2022 and to be ready to occupy in February of 2027.

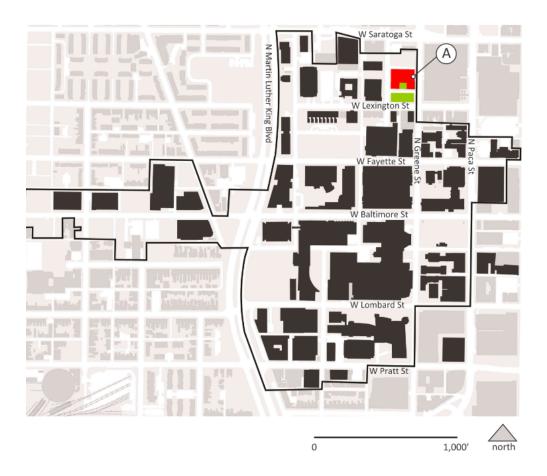

Figure 1 - Campus Map. A: New School of Social Work

#### C. SECTION 2, INSTRUCTIONS TO THE CONSULTANT

#### 1. Project Scope

- 1.1 The scope of the project includes the design and construction of a new 129,213 GSF, 73,651 NASF School of Social Work Building. It is the intent to construct a functional, durable, and welcoming facility that may be economically operated, maintained and modified in the future to accommodate changing educational programs and technological infrastructure. To realize these goals, the University expects innovative and appropriately economical design, construction and operating systems conforming to the constraints of the site and the local economy and climate.
- 1.2 University of Maryland, Baltimore, Facilities Management Design and Construction (UMB D&C) will conduct the Architect/Engineer (Consultant) selection and award the contract to the successful bidder with approval of the State of Maryland Board of Public Works. The consultant contract will be with UMB D&C. UMB D&C is responsible for the implementation of the contract.

#### 2. Qualifications of the Consultant

2.1 The Consultant is expected to be the architect serving as the prime design consultant and will utilize managers, designers, and technicians with the education and experience necessary for the design of this project. All contract documents shall be signed and sealed by licensed professionals. As a minimum, the following disciplines are expected for the Consultant's team:

Basic Services Design Team:

Architect

Civil Engineer

Structural Engineer

Mechanical (HVAC, HVAC Controls, Energy Analyst and Plumbing) Engineer

Electrical Engineer, including Lighting Design

Fire Protection / Fire Alarm Engineer

Special Services Required for Design team:

**LEED Accredited Professional** 

**Acoustical Engineer** 

Audio-Visual / Information Technology Specialist

Cost Estimator/Scheduler

Land Surveyor

Geotechnical Engineer

Building Envelope Commissioning Agent (obtained by the University)

MEP Commissioning Agent (obtained by the University)

Interior Design and FF&E Design

Audio Visual Designer

**Telecommunications Engineer** 

Landscape Architect

Full Team Energy Modeling per ASHRAE 209

# 3. Consultant's Design Responsibilities

- 3.1 The Consultant will be expected to provide all design services in accordance with the most recent edition of the <a href="UMB Procedure Manual for Professional A/E Services">UMB Procedure Manual for Professional A/E Services</a>. The Procedure Manual is available online.
  - https://www.umaryland.edu/designandconstruction/documents/
- 3.2 The Consultant firm shall provide complete professional services for the design of a new School of Social Work Building. The Consultant will be responsible for the complete design of the entire project, including all MEP systems, equipment, piping, controls, and connections to existing utilities. The design shall include all necessary modifications to the proposed site. Design services shall include all calculations, drawings, specifications, details, meetings, etc. required for a complete, accurate and biddable set of documents, fully coordinated between all disciplines.
- 3.3 The specific programmatic requirements and design criteria provided in this Program are as complete and accurate as possible at this point in the project. It will be the Consultant's responsibility to consult with the users via the UMB D&C to verify or make refinements to these requirements and criteria throughout the design process.
- 3.4 The Consultant is responsible, during each phase of design, to recommend alternatives that will achieve cost efficiencies to maximize available funding. These recommendations should consider creative design solutions rather than a reduction in the quality of the final product. The design must be flexible enough to allow for subsequent system and subsystems modifications without massive changes to the physical plant in the future.
- 3.5 The Consultant shall provide complete and integrated interior design services including the selection and specification of a complete furnishing, equipment, and audio-visual equipment bid package.
- 3.6 The Consultant shall provide UMB D&C with drawings, studies, calculations, cut sheets, and specifications at each design submittal. Each submission deliverable shall comply with the most recent edition of the <a href="UMB Procedure Manual for Professional A/E Services">UMB Procedure Manual for Professional A/E Services</a>.

### 4. Owner's Roles & Responsibilities

- 4.1 The University of Maryland, Baltimore, Facilities Management Design and Construction (UMB D&C as Service Center) and the School of Social Work (SSW as Using Agency) will have appropriate representatives as points of contact for the Consultant. All official contractual correspondence must go through the Service Center. The respective responsibilities of UMB D&C and SSW are as follows:
  - (a) UMB Facilities Management Design and Construction (UMB D&C as the Service Center).
    - i. Select the Consultant.
    - ii. Prepare the schedule for the State DGS Architectural Review Board's review

- of the design. The Consultant is required to have one meeting/presentation at the Schematic Design stage.
- iii. Provide direct contract responsibility for instructions to the Consultant, and for construction management, and administration of the Consultant after selection by the Service Center. Those responsibilities include final design review and approvals (including change orders), all the contract actions (with the informed consent of UMB), and the processing and payment of all invoices.
- iv. Serve as the technical advisor to SSW for specific problems that arise during design and construction, including program interpretation.
- v. Be responsible for construction contract bidding and award with approval of the State of Maryland Board of Public Works.
- vi. Be responsible for inspection of the project and any testing that needs to be done on the site, either by Service Center personnel or a contracted firm.
- vii. Provide SSW and review agencies with the design documents and cost information for design review, and then collect and consolidate all comments and send them to the Consultant.
- viii. Be responsible for scheduling progress meetings and conferences between the Service Center, SSW, and the Consultant, the number to be identified at the pre-fee negotiation meeting with the selected Consultant.
- ix. Interpret, with the concurrence of SSW, the program as it pertains to the execution of both the Consultant and Construction Contracts. The Service Center will coordinate any required program changes as they relate to the Consultant's contract. The Service Center will prepare all contract-related changes. Discharge direct contractual responsibility for instructions to the Consultant, for construction management, and administration of the Consultant. Those responsibilities include final design review and approvals (including change orders) and all the contract actions and the processing and payment of all invoices.
- x. Coordinate with the Commissioning Agents for the project with the Consultant participating in the commission activities during design, construction, and the post construction period.

# (b) School of Social Work (SSW as the Using Agency)

- Establish and prepare program requirements and amend the program to address the comments and concerns of the State and the University System of Maryland.
- ii. Review submissions for general conformance to program and other institutional criteria, and coordinates with UMB D&C to determine if a program change is required.
- iii. Provide the Consultant with the preliminary list of equipment and furniture requirements during the preliminary design phase.
- iv. Participate in and review all design and construction issues.
- v. Occupy and operate the facility upon completion.
- 4.2 It is the intent to separately engage the services of a Construction Management (CM) firm.

#### 5. Information Furnished to the Consultant

- 5.1 The UMB Design and Construction (D&C) Archives will make available, for review, any existing utility plans, topographic plats, and record drawings of construction documents (drawings and specifications) on file.
  - (a) Drawings of Existing Conditions: Existing utility, site infrastructure and building plans are incomplete. UMB D&C assumes no responsibility regarding the accuracy of any drawings. The Consultant will have to field verify actual systems layouts and existing conditions during design.
  - (b) Design Standards: The most current facility design standards are available online. https://www.umaryland.edu/designandconstruction/documents/
  - (c) Topography Maps: The Consultant is responsible for providing topography maps. UMB D&C can provide the most recent maps but will assume no responsibility for their accuracy.
  - (d) Test Pits, Holes and Borings: The University has no subsurface information for this project. The Consultant is responsible for providing any test pits, holes, or borings as needed to complete the construction documents.
  - (e) Prior Studies and Reports: UMB D&C will make available prior studies and reports as necessary to facilitate the design.
  - (f) Master Plan: UMB D&C will provide the Consultant with a copy of the most recent master plan.
- 5.2 The University uses an internet-based project management system, e-Builder®, to administer the project for the duration of the Contract. The Architect shall use this medium for all the project's submissions, documentation, communication, transmittals, submittals, construction logs, storage and management of common documents, and other purposes as determined by the University. The University will provide the e-Builder licenses at no charge to the design team.
- 5.3 UMB D&C will provide a Room Numbering System at the Schematic Design Phase and any subsequent design phases necessitating a room numbering change.

# D. <u>SECTION 3, SITE DEVELOPMENT CRITERIA</u>

# 1. Site Design Criteria

- 1.1 The consultant should refer to the latest edition of the <u>UMB Design Standards Manual</u> that set requirements for Site Design.
- 1.2 Specific site work required includes, but is not limited to:
  - (a) Demolition of existing site improvements.
  - (b) Replacement of existing sidewalks, curbs and street paving damaged during construction or as required by the City of Baltimore and in conformance with UMB Urban Design Guidelines. During the initial phase of design, the consultant shall establish the anticipated limits of site improvements.
  - (c) A complete analysis and design of all utilities required to support the new building.
  - (d) Storm water management and erosion and sediment control design.
  - (e) Pedestrian and service vehicle access to the site.
- 1.3 The building site is bounded by N. Greene Street on the east, W. Lexington Street on the south, and Pearl Street on the west. See Figure 2 Site Location. Overlapping the contemplated building footprint and to the immediate north is an existing UMB parking lot beyond which will be a new facilities parking lot and green space which are now in the planning stages.
- 1.4 Topography and Soils. There is a modest slope across the site of approximately 6 feet. A geotechnical report is not available. The consultant shall be required to provide an upto-date topographic survey sufficiently detailed for compete site and utility design and a new geotechnical investigation and analysis.
- 1.5 Site Drainage. Storm water drainage must be managed within the limits of the site with outfalls from storm water management structures directed to the closed storm drain system beneath surrounding streets. The consultant shall be required to apply for the required City of Baltimore Clear Water Connection Permit to tie on-site storm drains to the public system.
- 1.6 Landscape, Hardscape, Site Furnishings, Site Lighting, Public Art. Landscape, hardscape, site furnishings and site lighting shall be designed in accordance with the UMB Urban Design Guidelines. The placement of seating should create comfortable places reinforcing the welcoming image of the new School of Social Work. The consultant shall be required to coordinate with the Maryland State Arts Council on the selection and placement of public art on the site though Maryland's Percent-for-Art Program.
- 1.7 Access and Service. Building access needs to accommodate pedestrians, vehicular drop-off, emergency vehicles, and service functions. Vehicular and pedestrian access including accessible entrances to the proposed new SSW building can be easily accommodated from all directions. Pearl Street, because of its lower traffic volume, is recommended as the best option for any future back-of-house service access. A paved

- service yard accommodating delivery trucks, trash trucks, service vehicles, dumpsters, trash compactor, and pad mounted electrical equipment shall be provided at the north side of the building. This service yard may also support an adjacent future building. Offpeak metered street parking is available on both sides of N. Greene Street.
- 1.8 Security. The site is two blocks from UMB's police station and is within the University's patrol area. Building security shall be addressed at the inception of each project with Public Safety and Facilities Management. Specific opportunities and constraints shall be identified for the site to ensure that the building design is safe and secure.
- 1.9 The design of all site features shall conform to the latest editions of the <u>UMB Master Plan</u>, the <u>UMB Urban Design Guidelines</u> and <u>UMB Design Standards Manual</u>. The UMB campus, as it has evolved over the past 200 years, possesses a unique, urban quality, characterized by the density and scale of its schools and buildings, palette of materials, preservation of older structures, and relationship to non-University buildings and historic districts within the City of Baltimore. The Urban Design Guidelines are provided to ensure that the quality and relationships within the built environment continue to support the mission of the University well into the future.
- 1.10 All work that takes place within City of Baltimore rights-of-way including road, curb, and sidewalk improvements and utility connections require review and approval of a Developer's Agreement.

# 2. Utility Design Criteria

- 2.1 The Consultant's recommendation for alignments and new connections are to be submitted during the preliminary design stage of the project. The Consultant is responsible for bringing any foreseen impact on the capacity of the existing utilities to the on-site and public utility network to the attention of the University.
- 2.2 Underground utilities investigation including test pits and utility locating by the Consultant is necessary to establish the precise location and size of all underground utilities and/or services in the construction area and surrounding the site. The Consultant is responsible for the complete system design of all new utility extensions from the points of the connection with existing systems to the building site. Further, the Consultant is responsible for a thorough investigation of all above- and belowground existing utilities to properly design and locate the new utility services. In the event a utility system within the site boundaries is identified to be insufficient to support the loads identified for this project, an upgrade of the insufficient utility system(s) is included in the project scope. This is understood to include an evaluation of all on-site utilities and any demand, which may be incurred on "down-stream" utility lines.
- 2.3 New and existing demand shall be coordinated with the City of Baltimore to ensure that all issues are considered, such as adequate capacities at tie-in points, etc. The design of public water, storm water, and sanitary utilities are to meet the requirements and approval of the City of Baltimore. Gas and the electric service are to meet the requirements and approval of BGE.

- 2.4 Steam Service. Steam is available in Pearl Street though the exact extent and size is not known. Consultant shall determine from the district steam utility provider the type of service available and the optimum location for connection to the system. Steam service availability and capacity are to be coordinated with and in accordance with district steam provider's standards and details.
- 2.5 Chilled Water Service. UMB has a planned extension of its chilled water system (as of May 2020) that will bring chilled water north from the School of Dentistry to the rear of buildings facing the south side of Fayette Street. Consultant shall plan to connect to that chilled water extension near the intersection of Pearl Street and Reiman Court. The necessary approval of a City Developer's Agreement for the portions of the connection in public rights-of-way shall be part of the project.
- 2.6 Site Electric Service. The building electric service is to be provided from UMB's private electric network. Primary electrical service is available from the University 13.2 kV distribution system. Provide a new feeder pair (15 kV, 500 MCM, 133% EPR) from the Master Switching Station (MSS) through an existing UMB electric manhole located at the NW corner of W Lexington St & N Arch St. A new duct bank and manhole arrangement shall be provided from the existing UMB manhole to the new School of Social Work building (Figure 2 Proposed Site Utilities). Ductbank construction through any public right-of-way will require the City of Baltimore's approval for the connection. Refer to the electrical section of the report for building electrical requirements.
- 2.7 Telecommunications Service. Telecommunication service to the proposed building is to be served from the campus telecommunication network, the closest point being an existing vault in Arch Street northwest of UMB's Lexington Building. Please refer to the electrical section of the report for building telecommunication requirements.
- 2.8 Domestic Water. The project will be supplied domestic water from the City of Baltimore system. The consultant is to locate the water service and design a connection to the building. The consultant will be required to obtain all approvals from the City to construct the underground waterline and connection to the existing piping. The building connection will be a combined domestic and fire waterline. Flow tests on fire hydrant located nearest to the proposed water connection will be required to confirm the existing pressure and available water volume. The building will require redundant water connections for fire protection. Water is available in both Greene and Pearl Streets for the redundant connections.
- 2.9 Natural Gas. Natural gas will be brought to the building from the existing BGE underground gas piping. The consultant is to locate the existing gas system and design from the existing gas line connection to the building to provide heating service. The consultant is to confirm with BGE that the capacity of the existing gas service is adequate and reliable for the building loads. The consultant will be required to obtain all approvals from BGE for use and metering of the gas service and with the City of Baltimore for construction within the right- of-way.

- 2.10 Sanitary Sewer. The building will be connected to the existing Baltimore City sanitary system. Sanitary sewer is available near the southwest corner of the construction site. The consultant is to locate the sanitary service and design a connection to the building. The consultant is to obtain approval from the City of Baltimore for the connection to their sewer system. Included in the approval is the confirmation of the capacity of the existing sewers for the additional flow from the building.
- 2.11 Storm Drainage. The existing Baltimore City storm drain network in the area consists of closed storm drain systems beneath Greene, Lexington, and Pearl Streets which all converge near the southwest corner of the site and ultimately flow to a large culvert beneath Arch Street one block to west of the site. The consultant is to obtain approval from the City of Baltimore for the connection(s) to their storm system. Included in the approval is the confirmation of the capacity of the existing storm drains for the additional flow from the building and the site. Drainage patterns around structures should be directed away from foundations, walks, patios, roadways, and grass areas so as not to interfere with the function of these site elements. The new building site drainage and storm drain system to include all storm water management structures, if any, as required below. Public storm drains are available near the southwest corner of the construction site.
- 2.12 Storm Water Management. The selected Consultant is required to provide SWM in accordance with the latest edition of MDE guidelines. Early coordination with the reviewing agency (MDE) is essential to preclude delays. In general, a site/grading plan adequately developed to provide a complete sediment control plan and storm water management plan including required supporting calculations must be submitted at or immediately following the Design Development submittal stage.
- 2.13 Erosion and Sediment Control. Erosion and sediment control practices shall be in conformance with the latest Maryland Standards and Specifications for Soil Erosion and Sediment Control for State and Federal Projects published jointly by Water Resource Administration, Soil Conservation Service, and State Soil Conservation Committee. Plans will require review and approval by MDE concurrent with stormwater management reviews. The Consultant will also be required to apply for the required National Pollutant Discharge Elimination System (NPDES) Permit through MDE.
- 2.14 *100-Year Flood Plain*. The Consultant is to confirm that the 100-year flood plain is not within the project limits.
- 2.15 Traffic and Parking. The Consultant will be required to perform a traffic study for the effect of the building on the surrounding roadways. Any new curb cuts and the removed parking will need to be included in the report. Pedestrian traffic from the building and disruption of the existing traffic is to be covered in the report. Temporary traffic control for utility construction will be included in the design documents and approved by the City of Baltimore. Onsite parking is not anticipated.

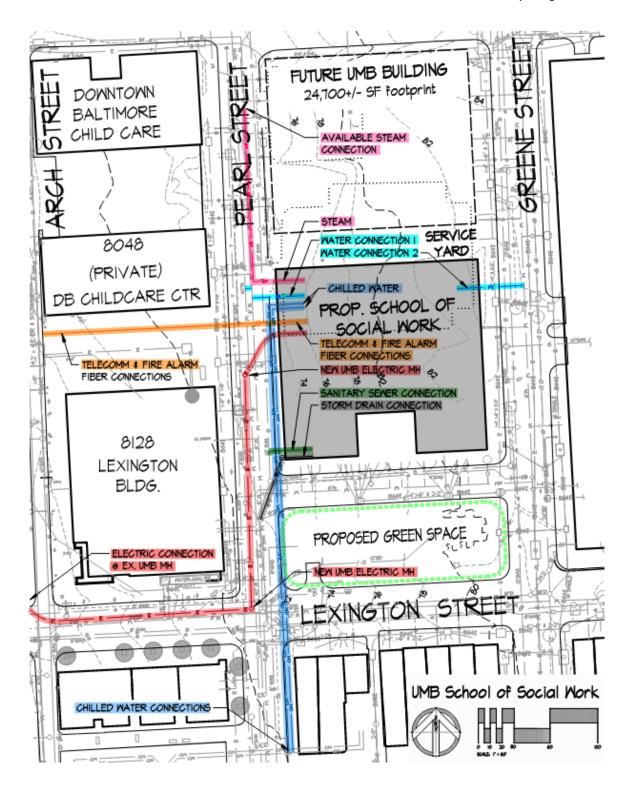

Figure 2 - Proposed Site Utilities. Offsite design work is involved to bring utilities to the building site.

### E. SECTION 4, BUILDING DESIGN CRITERIA

# 1. Building Design Criteria

- 1.1 The overarching requirement for the design is to provide the optimal accommodation of the program requirements within the constraint of the construction budget. The primary design goals are functional flexibility, warm and welcoming aesthetics, and environmentally sensitive sustainable design. Energy conservation measures must be integrated into the design concept. The selection and quality of finish materials both interior and exterior must be appropriate to UMB and shall conform to the latest edition of the UMB Urban Design Guidelines and UMB Design Standards Manual.
  - (a) In keeping with School of Social Work's mission, vision and strategic direction, the unique objectives for this project are as follows:
    - i. EDUCATION. Provide innovative instruction, research, and continuing education programs to educate students, alumni, and community partners to become skilled practitioners and leaders. Ensure learning spaces can flex and adapt to accommodate emerging learning modalities and technologies. Design corridors and transitional spaces to facilitate interprofessional interactions and collaborations of learners from all backgrounds.
    - ii. COMMUNITY IMPACT. Promote individual, group, family, and community well-being at local, state, national, and international levels. Create a facility that is welcoming, warm, inviting, and responsive to the scale and context of the neighborhood.
    - iii. RESEARCH. Create, evaluate, and implement social work innovations.Workspace should promote collaboration, health, and productivity, while also providing flexibility to adapt to changing work habits.
    - iv. DIVERSITY. Create an atmosphere that fosters cultural responsiveness within the school and the community. Be an inclusive space for all that serves the unique needs of our diverse student body and community.
    - v. THE PROFESSION. Set a standard for the profession in educating and implementing best practices. Create spaces that are comfortable, functional, practical, and flexible to permit future change. Provide access to outdoor green spaces such as a plaza, internal courtyard, or occupied roof and treat the design of outdoor spaces with the same quality level as indoor spaces.
    - vi. FINANCIAL RESOURCES. Increase the breadth and depth of support for the School of Social Work. Focus on those issues that will provide efficiency of operation relative to the University's mission, day-to-day operations, maintenance, and energy conservation.

- vii. ENVIRONMENTAL JUSTICE. All building and site components of this new project should reflect UMB & SSW's essential commitment to environmental justice, sustainability & resilience. Access to daylight & views, integrative design, renewable energy systems, finish material selections, greenwalls, use of recycled or re-purposed materials are examples of some of the strategies being sought for the design.
- 1.2 The consultant should refer to the latest edition of the <u>UMB Urban Design Guidelines</u> and <u>UMB Design Standards Manual</u> that set requirements for:
  - Exterior Building Design
  - Building Typology
  - Building Form
  - Windows and Entrances
  - Exterior Materials

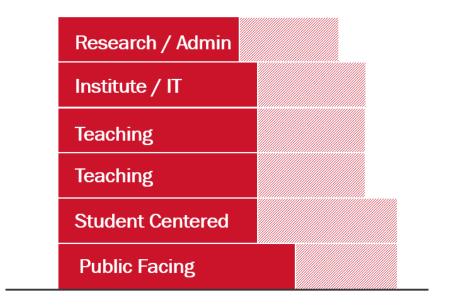

Figure 3 - Program Themes by Floor

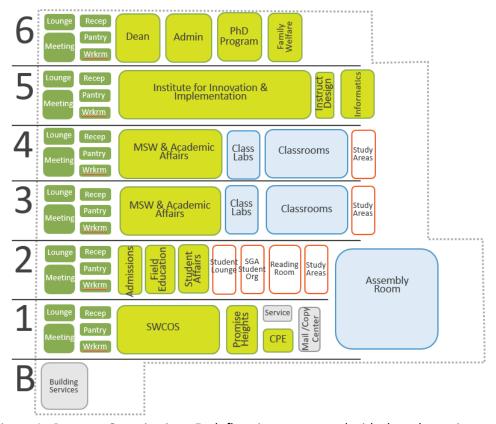

Figure 4 - Program Organization. Each floor is programmed with shared meeting space, reception, lounge, pantry, and workroom.

Figure 1 - Massing Concept. Materials and scale should be compatible with the surrounding neighborhood.

- 1.3 The project is situated within a designated historic district. Maryland Historic Trust (MHT) should be consulted early in the design to ensure compatibility with existing historic fabric in the district.
- 1.4 The consultant should refer to latest edition of the <u>UMB Master Specifications</u> that set requirements for:
  - General Requirements
  - Existing Conditions
  - Openings Figure 2- Program Organization. Each floor is provided with shared meeting spaces, reception area, lounge, pantry, and workroom.
  - Specialties
  - Equipment
  - Furnishings
  - Special Construction
- 1.5 Building Service Spaces: In addition to the program space required by the project program, the design of each project shall include necessary general use and service spaces. Quantification of general use space shall be determined by building code requirements, such as toilet rooms, emergency egress stairs, elevators, etc., and/or by functional necessity, such as equipment rooms, loading areas, etc. General use space (sometimes categorized as "non-assignable area") is included in the total GSF. The following functions shall be accommodated:
  - General Use (Circulation) Space
  - Toilet Rooms
  - Storage and Shipping Rooms
  - Maintenance and Custodial Rooms
  - Mechanical Equipment Rooms
  - Electrical Equipment Rooms
  - Voice, Computer, Data, and IT Rooms
  - Water Service Entry Room
  - Fire Command Center
- 1.6 Design of Toilet Facilities. Toilet facilities shall be designed as all-gender in lieu of segregated-gender type. Appropriate single user shower facilities for bicycle commuters shall be provided.

# 2. Mechanical and Plumbing Design Criteria

2.1 In general, the systems shall be designed to provide maximum reliability, including the avoidance of systems or equipment for which there is an inadequate history of satisfactory performance. The work must be designed to be readily maintainable with adequate clearances for servicing provided for all operating equipment. No operating equipment shall be located above ceilings unless specifically designed for above ceiling applications and only when there are no suitable alternate locations. Additional system design components shall be utilized to the LEED rating goal. Energy simulations along

with LEED required calculations shall be provided to support the LEED certification level for the building.

- 2.2 The consultant should refer to the latest edition of the <u>UMB Design Standards Manual</u> that set requirements for:
  - Plumbing Design
  - HVAC Design
  - Fire Protection Design
- 2.3 The consultant should refer to latest edition of the <u>UMB Master Specifications</u> that set requirements for Mechanical Divisions 21-23.
- 2.4 Building Heating System Design: High pressure steam service shall connect to the existing district steam distribution system. Building heating water shall be produced through steam to hot water heat exchangers. In lieu of high-pressure steam, other sustainable design practices shall be considered to minimize detrimental impacts to the environment over the life of the building.
- 2.5 Building Cooling Design: Chilled water shall connect to the campus east chilled water loop located in Pearl Street. Chilled water shall be distributed in the building to provide cooling throughout the building. Other sustainable design practices shall be considered to minimize detrimental impacts to the environment over the life of the building.
- 2.6 Building Domestic Water Heating Design: Domestic hot water shall be produced from low pressure steam system via steam to hot water heat exchangers. In lieu of low-pressure steam, other sustainable design practices shall be considered to minimize detrimental impacts to the environment over the life of the building.
- 2.7 Systems commissioning: Coordinate specifications with the commissioning plan for all mechanical and electrical systems and equipment. The plan shall include description of performance testing of each piece of equipment, every system and the operating safety controls and interlocks in accordance with the design capacities and parameters. The plan shall include the documentation of each system performance to ensure compliance with design intent and fine tuning and calibration as necessary. The A/E shall cooperate and coordinate with the commissioning agent, construction manager, and trade subcontractor to develop the plan, shall review all data sheets and documentation, and shall review all performance testing reports to verify the performance meets the design intent.

#### 3. Electrical Design Criteria

- 3.1 The design shall provide safe and reliable electrical systems, which are flexible, maintainable, and energy efficient. The design shall comply with all applicable codes, regulations and standards including UMB's Design Standards. Verify UMB's specification requirements for proprietary equipment and product and system independent testing.
- 3.2 The consultant should refer to latest edition of the <u>UMB Master Specifications</u> that set requirements for Electrical Divisions 26-28 including:

- a) Coordinate building substation arrangement with UMB standards.
- b) Emergency / Standby Power Design.
- c) Power and lighting design (including the recent legislative move towards allelectric heating systems reducing UMB's carbon footprint).
- d) Rooftop Solar array (grid-tie application).
- e) Fire alarm design
- f) Security design
- g) Telecommunications and audio-visual design.
- 3.3 The consultant shall contract a Telephone / Data engineering specialist who will be responsible for the following at a minimum:
  - a) Incorporating UMB Center for Information Technology Services (CITS) Standards and details into project contract documents.
  - b) Coordinating with CITS for determining networking requirements, connections, and pathway to the new building.
  - c) Design and commissioning of network infrastructure supporting the buildings networking and communications systems such as Eduroam wi-fi, building automation, fire alarm, audio visual systems, access control, security, and utility metering.
  - d) UMB is served by a dedicated Fire Alarm fiber loop that is separate from the IT/Communications fibber network.

#### F. SECTION 5, SPACE REQUIREMENTS

#### 1. Introduction

1.1 The following diagrams and specifications represent the consultant's understanding of the spaces and their requirements based on meetings with the Owner. All room requirements and specifications shall be reviewed in detail with the Owner during the program verification phase.

#### 2. Common Office Areas

2.1 The office program supports many different departments with the School of Social Work. Each department has a common need for meeting space, a reception area to greet and orient visitors, a work area for photocopying and printing, lounge space, and kitchenette space. Rather than duplicate these functions inside each department, it was determined that common resources would be provided on each floor to be shared primarily by the departments occupying that floor. The quantity and type of meeting space was determined through a best-practices approach analysis of the quantity of open workspace. The quantity, type, and distribution of meeting space by floor shall be evaluated and refined during the design phase.

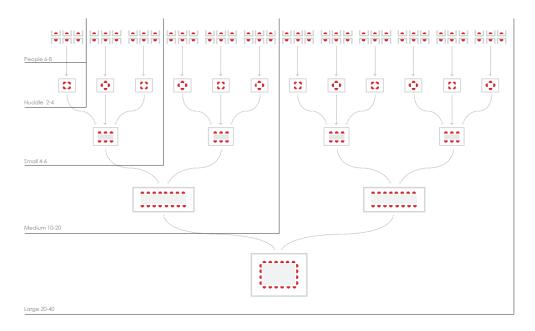

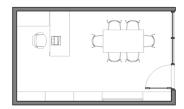

Figure 6 - Determining the Quantity and Type of Shared Meeting Spaces

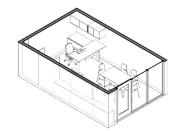

# 3. Workspaces

3.1 The table below summarizes the 5 workspace types found in the program.

# 1 Dean Office

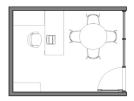

250 SF Adjustable height work desk, return with overhead storage, bookcases, small table with 6 chairs.

# 2 Associate Dean Office

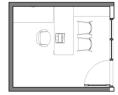

150 SF Adjustable height work desk, return with overhead storage, bookcase, small table with 4 chairs.

# 3 Standard Office

110 SF Adjustable height work desk, return with overhead storage, bookcase, 2 chairs.

# 4 Open Workspace

64 SF Modular workstation with storage.

# 5 Hoteling

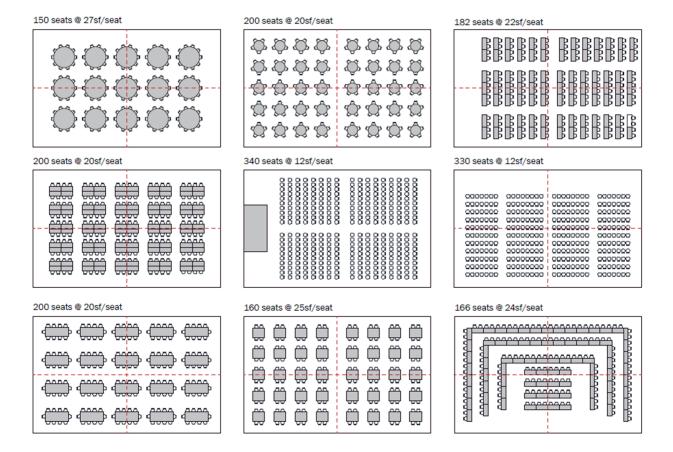

36 SF Table and chair.

# 4. Assembly Room

4.1 The program includes a 4,000 SF multi-purpose flat floor assembly room that is subdividable into four spaces to accommodate four concurrent 30-person meetings, one concurrent 50-person meeting with two 25-person break-out rooms, or one 200-person meeting. The program supports this multi-purpose assembly room with appropriate support space for pre-function, furniture storage, catering support, coat storage, and audio-visual equipment.

**BUILDING AREA: 1.0 CLASSROOM FACILITIES** 

SPACE: 1.01 SMALL CLASSROOM

**HEGIS CODE: 110** 

Occupants SF/Occupant AREA

**NET AREA:** 30 30 900 NASF

**FUNCTION:** General purpose flat-floor classroom for instruction and training.

ADJACENCIES: Locate near the other instructional spaces with direct access from general

circulation.

FURNITURE FIXTURES AND EQUIPMENT:

• Ceiling-mounted projector with motorized screen

Marker boards on min (2) walls

Rectangular movable tables and chairs

 Movable lectern with 17" touch panel with annotation, wireless microphone, document camera

• Online meeting capability

Lecture capture capability

Amplified sound and ceiling speakers

Assisted listening capability meeting accessibility standards

Digital wall clock

**UTILITIES:** 

• Per UMB Architectural and Engineering Design Standards

 Lighting to be direct/indirect dimmable with intuitive lighting control allowing for separate control of marker board lighting and room lighting to achieve lighting levels that are acceptable for projection and note taking

 Provide safe and convenient access to electrical power for end-user devices; this may be accomplished via outlets in the floor or wall close to students, or by flexible, portable charging systems or other means

# ARCHITECTURAL FEATURES:

Windows Exterior windows to have window treatment for room darkening and glare control

Doors Meeting UMB design standards

Floors Carpet tile

Walls Standard gypsum board with appropriate STC-rating

Ceilings Acoustic ceiling panel

Acoustics Meeting current ANSI Standard S12.60 on Classroom Acoustics

Comments: For team-based active learning.
